Resume Project Entry — Digital Forensics Case Study

Case DF-2026-1102-017 | Host ci-worker-03 | All times UTC | Incident date 2026-10-29

Academic Project | Linux CI/CD Incident Reconstruction

Designed a detailed fictional incident-response case involving suspicious SSH authentication, Python execution, user-level systemd persistence, CI configuration staging, outbound HTTPS activity, and Linux audit correlation.

Developed a 24-event UTC timeline, IOC register, chain-of-custody workflow, evidence inventory, ATT&CK mapping and evidence-based competing-hypothesis analysis.

Created reusable Bash/Python utilities for offline authentication-log parsing, SHA-256 manifest generation and timeline normalization. Skills: Linux forensics, incident response, log analysis, MITRE ATT&CK, technical reporting, evidence handling.

Appropriate Resume Positioning

List under Projects or Academic Projects. Do not list as employment, client incident response, a completed real investigation, or verified investigative experience.
